### **Abstract**

This study investigated social media use and study habits of secondary school students in Anambra State. Three research questions guided the study while four null hypotheses were tested at 0.05 level of significance. The design of the study was descriptive survey. The population of the study is 4,996 consisting of Senior Secondary Two (SS2) students from public secondary schools in Awka Education Zone of Anambra State. The sample size consisted of 500 students chosen from their local governments and were randomly chosen. The instrument used for the study was Social Media Use Questionnaire and Study Habit Inventory. The instrument was validated by three experts and reliability index established to be 0.82. Statistical weighted mean was used to answer research question one while summated scores was used to answer research question two. t-test was used to test hypotheses one and two while Pearson Correlation Statistics was used to test hypotheses three at 0.05 level of significance. The findings of the study revealed that students access various social media but mostly accesses facebook, whatsapp and yahoo. Majority of the students 429 in number indicated that they have poor study habit while 326 students also indicated that they have good study habit. The findings also showed that student differ significantly in ten out of 21 social media they access due to gender. It is also observed that there is no significant difference in the mean scores of male and female on their study habit as they make use of social media. The finding also revealed that there is no significant relationship between students use of social media and study habit( $r=0.02$ ,  $p=0.57$ ). Based on the findings the study recommended that Teachers, parents, guardians and school management should monitor their students on their use of social media even though it was observed in this study that social media has no significant effect on their study habit. They should also guide and inform them properly on the vulnerability they may face on these sites if not utilized in moderation.

## **Introduction**

Modern technology in communication no doubt has turned the entire world into a global village as the world today is celebrating the improvements in communication technology. This has broadened the scope of communication through Information and Communication Technologies (ICTs). ICT has helped people to be better informed, enlightened and kept abreast with world developments. The 21<sup>st</sup> century continues to marshal in technological advancement that change the nature of communication, socialization and private versus public information. One of such change is the emergence of social media site that the world's population currently enjoys, especially among the younger generation where they socialize with peers and friends (Adomi & Ejirefe, 2012).

Social media comprises of activities that involve socializing and networking online through words, pictures and videos. Kaplan and Halein, (2010) defined social media as a group of internet-based applications that build on the ideological and technological foundations of Web 2.0, and that allows the creation and exchange of user-generated content. It also refers to activities, practices and behavior among communities of people who gather online to share information, knowledge and opinion using interactive media. Through social media people seek and enjoy the companionship of others online. It supports the sharing of information and services among individuals and groups having a common interest. Social media platform can be relevant to information seeking and sharing on information retrieval perspective by providing speed and quick information to the information community by connecting and collecting digital information required by the user (Sherwin, 2013).

It is also of importance to students for various reasons like exchanging ideas, feelings, personal information, pictures and videos. It also encourages interaction between students. This is especially helpful in college environments where students create a bond within the institution. Likewise, it is useful for team projects where students can hold meetings in real time and work on their projects and also provide a richer experience for resources like videos, resource website, tutorials which can be shared very easily with the entire classroom at the click of the button. Additionally, some of the postings can be informative and educative and the students after reading such posts can comment on them. Some of the students use them mainly for making friends, chatting, exchange news and photographs (Young, 2006). They also use it to access information that is involved in school life as well as entertainment.

Consequently, the use of social media extends opportunities for formal learning across geographical contexts and there are various social media sites that are been accessed. Kuss and Griffiths (2011) described social media sites as virtual communities where users can create public profiles; interact with real- life friends and meet other people based on shared interests. It is also referred to as virtual places where people find themselves and share information. These social media sites have an open membership that as soon as one opens an account and uploads his or her data on the profile page, the person is entitled to create a network of friends. Depending on the website in question, many of these online community members share a common interest such as hobbies, religion or politics. According to Wortham (2010), social media sites are defined as web-based services that allow individuals to construct a public or semi-public profile within bounded system, articulate a ;list of other users with whom they share a connection and a view of the list of connection made by others within the system. With social media sites, one can send and receive messages almost immediately; however some social media sites are specifically designed for mobile phones. Some are accessed via computers and others could be accessed using both mobile phones and computers or other information communication technologies. Some examples of social media sites include Facebook, 2go, Naijapals, whatsapp, classmates, yahoo messenger, twitter etc. There are no restrictions as to which social media sites one should belong; one can be a member of as many as possible. According to Loving and Ochoa (2010), social media can used for the purpose of connecting with friends and family regardless of location, keeping up with the latest events and for academic purposes.

Meanwhile a student's primary objective is the academics especially at secondary school level because it is the stage of career building; therefore, the need to take their studies much seriously cannot be overemphasized. Study is a systematic acquisition of knowledge and an understanding of facts and principles that calls for retention and application(Mace, 2002). Shabi and Udofia (2009) affirms that studying is most important activities of life through which one enter into the life and experiences of others, extends knowledge, scope of experience and enjoyment.

Due to technological development, study habits are changing. Study habits are defined as those techniques such as summarizing, note taking, outlining or locating material which learners employ to assist themselves in the efficient learning of the material at hand. According to Chand, 2013 study habit is the tendency of pupil to study when the opportunities are given, whether systematic or unsystematic, efficient or inefficient. Additionally, study habit is a process from which an individual gets proper input to feed hunger and to quench thrust for knowledge. The study habits thus are of great assistance to actualize the potentialities of the individual(Vyas,2002).Good study habit plays an

important role in human performance in academic field. Vyas further emphasizes that despite possessing good intelligence and personality, the absence of good study habits hampers academic achievement. Hence, the study habits of students plays important role in learning and fundamental to school success.

In our society today, while technology is slowly taking a steady control over individual lives, the study habit is fast vanishing into thin air (Ezema & Ekere 2009). Additionally, Ezema and Ekere affirm that students now lack the skill of reading. Instead they spend more hours on electronic media. Browsing the net, playing with handsets and passing non-stop SMSs seem to be the order of the day, thereby making reading a book or any other piece of written material in a quiet or peaceful corner of a library or home become an archaic idea for most school children and adults. Long (2012) postulated that it is so common these days that many young people are addicted to social media activities, abandoning homework and reading time in preference to chatting with friends, even at lecture times. . Mefor (2010) urged all Nigerians schools to launch a readership promotion campaign which will help to inculcate the culture of reading in children that will help them to develop a proper study habit. Also Olukemi (2010) advised Nigerian youths to imbibe the reading culture in all their endeavors. She lamented that lack of reading culture among youths nowadays has greatly affected quality of graduates being produced by the nation's higher institutions. When students have established good study habits, they would likely to be less stressed and not anxious during exam day, thus students who also organize and adhere to their established study schedules are more confident and calmed at test-taking time and yield better grades. Based on the above statements, it seems that social media may badly affect the study habit of the students.

It is against this background that this study seeks to ascertain if there is any possible effect social media use has on the study habits of secondary school students in Anambra State.

**Two research questions and one hypotheses guided the study and they include:**

1. What are the various social media commonly accessed by secondary school students?
2. What are the study habits scores of students?

There is no significant relationship between social media use and study habit.

**Method**

Descriptive survey design was adopted for the study. Descriptive survey design study seek to portray accurately the characteristics of a population with the attempt to make generalization of the result to the entire population (Nworgu,2015). The population of the study is 4,996 SS2 students of public secondary schools in Awka Education Zones of

Anambra State. Proportionate stratified random sampling technique was used to select 500 students representing 10% of the entire population. The research instrument for the study was a researcher structured questionnaire and a study habit inventory titled social media and study habit (SMQ). This was developed and adopted to collect data for the study with the response mode of Highly Accessed, Moderately, Rarely Accessed and not accessed. The response for the study habit inventory includes Always, Sometimes and Never. The reliability co-efficient of 0.87, 0.85 and 0.75 were obtained. The research questions one was answered using statistical weighted mean while research question two were answered using summated scores. Item with mean (x) score of 2.5 and above were given positive interpretation (Agreed) while items that received mean (x) scores less than 2.50 were interpreted negatively (Disagreed). Decision rule for research question two(2) is that any score below 3.00 to 6.00 was considered as poor study habit while the maximum score of 7-18 is considered as good study habit.

## Results

The findings of the study were based on research question and hypothesis and were presented below:

**Table 1 Mean scores of the students on the social media they commonly accesses**

S/No	The Social Media	N	X	Remarks
	Facebook	495	3.37	Accessed
	Whatsapp	495	3.15	Accessed
	Yahoo	495	2.50	Accessed
	Instagram	495	2.27	Not Accessed
	Ask me	495	2.17	Not Accessed
	2go	495	2.12	Not Accessed
	Twitter	495	2.10	Not Accessed
	Blackberry messenger	495	1.80	Not Accessed
	Pin interest	495	1.72	Not Accessed
	Classmates	495	1.71	Not Accessed
	Google buzz	495	1.52	Not Accessed
	Slideshare	495	1.37	Not Accessed
	Skype	495	1.37	Not Accessed
	Naijapals	495	1.36	Not Accessed
	Blogs	495	1.36	Not Accessed
	Netlogs	495	1.30	Not Accessed
	Web biographies	495	1.28	Not Accessed
	Linkedin	495	1.25	Not Accessed
	Bebo	495	1.24	Not Accessed
	Flicker	495	1.21	Not Accessed
	My space	495	1.20	Not Accessed

Table 1 shows that with mean scores ranging from 2.50 to 3.37 that only three social media were commonly accessed by students. They include: Facebook (X 3.37), Whatsapp (X 3.15) Yahoo (X 2.50). Also with mean scores ranging from 1.20 to 1.37 the students indicated that they do not access 10 out of the 21 social media studied.

**Table 2: Range of scores of the students on their study habit**

Range of scores	N	%	Remark
3 – 5.97	66	13.3	Poor study habit
6 – 9	429	86.7	poor study habit
7-11.98	169	34.1	Good study habit
12-18	326	65.9	Good study habit

In table 2 it was observed that with scores ranging from 3-5.5.97 (13.3%) and 6 to 9, 429(86.7%) students indicated that they have poor study habit, while 7-11.98(34.1%) and 12-18 (65.9%) have good study habit.

**Table 3 shows Pearson's correlation for the relationship between students social media use and study habit. (N=495)**

Social media use		Social media use	Study habit	REMARK
	Pearson Correlation	0.024 (p)		
	Sig (2-tailed)	-		
Study habit	<sup>N</sup> Pearson Correlation	0.74 (r)	0.024	NS
	Sig (2-tailed)	.000	–	
	N	495	495	

**NS= Not Significant correlation at 0.05 level of significance**

The result in Table 4 revealed the significance relationship between social media use and study habit. The result showed that there is no significant relationship between social media use and study habit of students ( $r = 0.02$ ,  $p = 0.57$ ). Therefore, the null hypothesis was accepted. Therefore, whether the students access social media or not, it does not have a significant relationship on their study habit.

## Discussion

The findings in table one (1) revealed that students secondary school students uses three social media, Facebook, Whatsapp and Yahoo to a high extent. It revealed that secondary

school students visit social media sites to get their assignments done, communicate with their peers and get information that supports their education. The findings of Chinthakayala et al. (2013) and Eke, Omekwu and Odoh (2014) gave credence to the findings of the present study. Chinthakayala et al. (2013) pointed out that facebook is a general social networking site and is more popular among college students. Eke, Omekwu and Odoh (2014) however, pointed out various social media sites used by the students. In their studies of use of social media, they reported that mostly all the student were using the social media sites especially facebook and whatsapp in interacting with friends, connecting to their class mates for online study and for discussing serious national issues which is also among the sites that are commonly accessed by the student as revealed in the present study. These results are in line with Humimed,(2016) which opined that the right mindset is essential in order to study smarter and a positive attitude makes oneself loves learning. He further added that there be no distraction, problem or upcoming event which is going to make studying frustrating or exhausting and that study should be done when focused. Slicker (2017) also pointed out that before one would engage in the actual study, enough energy is needed for learning a material so as to take notes word to word. This is of importance because it will help the reader to gather information that is needed to understand the material of study and where to study is to be a place that is conducive to concentrate in order to make study easy. The study of Yadav et al (2000) also gave credence to the findings of the present study. Yadav et al (2000) pointed out student improves in their performance through proper study habit and that study habit contribute significantly in the development of knowledge and perceptual capacities. Ogbodo, 2010 also pointed out that good study habit leads to the achievement of the learners goal through a prescribed pattern of steady behavior. Ogbodo further attest that many students do not have proper attitude towards study so they hardly care for developing good study habit. Bashir and Mattoo (2012) is of the opinion that good study habit acts as a weapon for the students to excel in life. Additionally, Palani (2010) stressed that effective reading is important avenue of effective learning and reading is interrelated with the total educational process and hence, educational success requires successful study habit.

## Conclusion

Based on the findings of the study, it is concluded that , it has shown that secondary school students in Awka Education Zone of Anambra State, Nigeria, accesses various social media but the ones commonly accessed are facebook, whatsapp and Yahoo. Majority of the students(429) possesses poor study habit and most of them (326) also have good study habit. There is also significant difference in ten out of 21 social media they access due to gender. Therefore, they do not differ significantly in their access of the other 11 social media studied. The second hypotheses showed that there is no significant

difference in the mean scores of male and female secondary school students on their study habit. There is also no significant relationship between social media use and study habits of the students.

### **Implications of the Study**

The findings of this study have some educational implications. The findings of this study have provided a basis for parents/guardians and teachers to understand the exposure their children and wards face while using social media.

The result of the study revealed that both male and female student's uses social media, this calls for the regular monitoring of students by the school management and teachers to ensure that they students do not drift away by the negativism on these sites. Therefore, any parent who wishes to improve and encourage the study attitude of their children should monitor their use of social media.

As the study revealed that social media sites such as Facebook, Whatsapp, and Yahoo are commonly accessed by the students, these sites have become an imminent medium of these students expression and also strengthen previously established relationships such as family, friends and peers. This implies that this means of communicating lessens the importance and relevance of face-to-face exposure to people.

As the study revealed that though students spend amount of time on social media but didn't affect most of the students study habit, there is still need for louder calls for Parents and teachers monitoring the students so as to make certain that they do not waste away useful time on meaningless online activities.

### **Recommendations**

Based on the findings and conclusion of this study, the following recommendations are made;

1. Teachers, parents, guardians and school management should monitor their students on their use of social media. They need to be guided properly and informed on the vulnerability they may face on these sites if not utilized in moderation.
2. Parents, teachers and the school management need also to teach the students' about time management. They should put a limitation to students activities while at school and at home so that they do not fritter away useful time on irrelevant activities like chatting.
3. School management and teachers should checkmate students' use of computers and cell phones especially during school hours to ensure that students are not carried away by the use of these technological devices.
