Abstract

As Nigeria continues to emerge as Africa's fintech epicenter, fintech firms face both growth opportunities and sustainability challenges. The study adopts a quantitative descriptive research design, utilizing secondary data from audited financial reports, regulatory sources, and ESG disclosures between 2022 and 2024. Key performance indicators analyzed include revenue growth, transaction volume, agent network coverage, and ESG compliance. Findings reveal that Moniepoint consistently ranked among the top three fintech firms in Nigeria, in terms of financial metrics (revenue growth rates, network, and active agents). In terms of sustainability, Moniepoint has demonstrated progress in environmental efficiency, gender inclusion, and governance transparency, ranking second among peers in ESG disclosure. The research concludes that Moniepoint has some competitive advantages. This study offers valuable insights for fintech operators, investors, and policymakers on sustainable digital finance models in emerging markets. It also contributes to the literature on ESG performance within Africa's digital financial services industry.

Key words: *Fintech; Sustainability; Moniepoint; Financial Inclusion; ESG Performance; Competitive Strategy.*

Introduction

The Nigerian fintech sector has grown exponentially over the last decade, becoming a central driver of financial inclusion, digital innovation, and economic growth in sub-Saharan Africa. With over 200 fintech companies, Nigeria is considered Africa's fintech capital, attracting the highest volume of start-up funding across the continent (CBN, 2023). The sector includes mobile money operators, payment service providers, digital lending platforms, and blockchain-driven firms, all competing to close the financial access gap and improve the efficiency of transactions. The rapid adoption of digital payment infrastructure, government-backed cashless policies, and increased smartphone penetration have further accelerated the sector's growth (Oladipo & Hassan, 2023). However, despite the potential, fintech firms in Nigeria face regulatory uncertainties, infrastructure challenges, and sustainability issues that threaten long-term performance.

Despite Moniepoint's notable achievements, maintaining sustainable performance in Nigeria's dynamic fintech landscape remains challenging. Issues such as increasing regulatory scrutiny, cyber risks, intense competition, and the pressure to meet ESG (Environmental, Social, and Governance) expectations have created barriers to long-term growth (Adebayo & Okeke, 2023). Furthermore, while profitability and customer acquisition metrics are improving, aligning these with social impact and environmental sustainability continues to be a strategic concern.

This paper, unlike the previous contributions that underscored competition, strategies and resolutions; and left out the place of regulators. It fills the specific gap relating to the roles of regulators as relevant in consistently shaping and serving as enhancing policy guide or framework. This paper is more of a foundation study, most of the data needed for this study including ratios are not necessarily available because, the interest of the erstwhile researchers do not align with the direction of this study.

Literature Review

Moniepoint Inc.: History, Mission, and Strategic Position

Moniepoint Inc., formerly TeamApt, was founded in 2015 with a vision to drive financial inclusion by enabling secure and seamless digital financial services for underserved communities. The company transitioned into a full-fledged banking platform offering agency banking, business banking, and payment infrastructure for small and medium-sized enterprises (SMEs). As of 2024, Moniepoint serves over 30 million individuals and 1.6 million businesses across Nigeria (Moniepoint, 2024). Moniepoint's mission is to power business growth across Africa by providing digital financial solutions that are accessible, affordable, and efficient. The company leverages its extensive agent network, proprietary POS systems, and embedded finance technologies to maintain a dominant position in the fintech market. With its customer-centric approach and strategic partnerships, Moniepoint has become a benchmark for inclusive fintech innovation in West Africa (Ojo & Chukwu, 2024).

Objectives

The objectives of the study are to:

1. Evaluate Moniepoint's competitive positioning in the Nigerian fintech sector.
2. Examine the sustainability practices and performance frameworks adopted by Moniepoint.
3. Analyze the challenges and opportunities in achieving long-term financial and ESG performance.

Moniepoint Inc. Competitive Position

Fig. 1

Full list of Nigerian companies that made the ranking

| Company | Sector | CAGR (2020–2023) | Year Founded |
|--|-------------------------------|------------------|--------------|
| Omniretail Inc | E-commerce | 71,818% | 2019 |
| PalmPay Ltd | Fintech & Financial Services | 31,850% | 2017 |
| Remedial Health Inc | Pharmaceuticals & Cosmetics | 8,384% | 2020 |
| Termii Inc | Media & Telecommunications | 2,817% | 2017 |
| Bisedge Ltd | Logistics & Transportation | 2,095% | 2016 |
| Winock Solar Nigeria Ltd | Energy & Utilities | 1667.8% | 2016 |
| Moniepoint Inc | Fintech & Financial Services | 1,663% | 2015 |
| Evercare Hospital Lekki Ltd | Health Care & Life Sciences | 1,382% | 2017 |
| Alpha Morgan Capital Managers Ltd | Financial Services | 753% | 2012 |
| X3M Marketing Ideas Ltd | Advertising & Marketing | 564% | 2012 |
| Chams Holding Company Plc | IT & Software | 357% | 1985 |
| Transcorp Hotels Plc | Hospitality & Travel | 330% | 1994 |
| Emerging Africa Capital Ltd | Financial Services | 312% | 2018 |
| Sundry Markets Ltd (Marketsquare) | Retail | 304% | 2014 |
| Nigerian Aviation Handling Company Plc (NAHCO) | Aviation & Technical Services | 299% | 1979 |
| Specta Technologies Ltd | IT & Digital Lending | 268% | 2019 |
| Moneypoint Microfinance Bank Ltd | Digital Banking | 254% | 2018 |
| Arnergy Solar Ltd | Renewable Energy | 244% | 2014 |

Source: Adopted from the report of Dan-Awoh in [Business News](#) on May 14, 2025

The above figure constitutes evidence that Moniepoint had been in lime light as seen in 2015, and 2018. Moniepoint only need to continue to build on its solid foundational performance. The report indicating 2019 – 2025 ranking is still being awaited as the time of this investigation.

Theoretical Frameworks

Porter’s Five Forces

Porter’s Five Forces framework offers a comprehensive lens through which the competitive dynamics of the Nigerian fintech industry can be assessed. The model evaluates five key forces: the threat of new entrants, bargaining power of suppliers, bargaining power of buyers, threat of substitutes, and competitive rivalry (Porter, 1985).

In the context of Moniepoint Inc., the threat of new entrants remains high due to the low entry barrier for digital start-ups. At the same time, the bargaining power of customers has increased with the rise of mobile-first banking alternatives (Oladimeji & Uzochukwu, 2023). Additionally, competitive rivalry is intense, with players such as Opay, Kuda, and Palmpay aggressively expanding market share through agent networks and cashback models.

Triple Bottom Line (TBL)

The Triple Bottom Line framework, developed by Elkington (1994), emphasizes that companies must align performance with three pillars: People, Planet, and Profit. Applying this to Moniepoint, the “People” dimension focuses on financial inclusion and employment through its agency banking model; “Planet” includes minimizing carbon footprints through digitized operations; and “Profit” ensures financial sustainability. Fintech firms in emerging markets increasingly adopt the TBL approach to align with global ESG expectations (Agbo & Ogundipe, 2024). For Moniepoint, integrating the TBL helps balance stakeholder interests, enhance brand reputation, and ensure long-term viability.

Literature Review

The African fintech ecosystem has evolved from basic mobile money services to more sophisticated digital banking, lending, and wealth management platforms. In Nigeria, the fintech industry accounted for over 60% of startup investments in 2023, with Lagos remaining the primary innovation hub (CBN, 2023). According to Adeyemi and Chika (2024), the influx of venture capital and the adoption of blockchain, AI, and cloud technologies are reshaping service delivery in financial markets. Moniepoint is a key beneficiary of these trends, using proprietary platforms and APIs to deliver end-to-end banking services across all 36 states of Nigeria (Moniepoint, 2024).

Digital innovation plays a pivotal role in addressing Nigeria’s long-standing issue of financial exclusion. The World Bank (2023) estimates that about 38 million Nigerian adults remain financially excluded. Fintech firms like Moniepoint contribute significantly by providing services such as mobile banking, POS agency networks, and micro-lending tools to rural and semi-urban communities. Okoro and Emeka (2023) argue that such innovations not only enhance user convenience but also reduce costs, increase transaction transparency, and empower SMEs. Moreover, the synergy between digital innovation and financial inclusion is linked to economic empowerment and reduced poverty levels.

Environmental, Social, and Governance (ESG) metrics are increasingly used to assess the sustainability and ethical impact of fintech firms. ESG compliance is essential for

attracting international funding and maintaining reputational integrity (Ibrahim & Falola, 2022). Nigerian fintechs, including Moniepoint, are beginning to integrate ESG principles into their strategic planning—adopting responsible lending practices, promoting gender inclusion, and ensuring digital literacy among users. According to Eze and Balogun (2024), fintech firms that actively incorporate ESG policies outperform competitors in long-term growth, customer retention, and investor attraction. Furthermore, the growing demand for green finance and social equity has positioned sustainability as a non-negotiable criterion for fintech operations.

Methodology

This study adopts an exploratory descriptive research design, which is suitable for analysing data comparatively in relation to performance of Moniepoint Inc within fintech industry. In practice, an exploratory study does not involve application of hypothesis and inferential statistics. This design supports usage of ranking to make comparisons in the fintech landscape (Bryman, 2023). The study relies entirely on secondary data collected from verified and reputable sources. Data were sourced from: Moniepoint Inc.'s audited financial reports (2022–2024); Central Bank of Nigeria (CBN) fintech and banking sector publications; Nigeria Inter-Bank Settlement System (NIBSS) performance dashboards; Industry intelligence reports; ESG and sustainability disclosures; and Press releases and investor communications. The descriptive framework for this study comprises of revenue growth, profitability ranking, transaction volume, agent network expansion; environmental initiatives; social impact; governance and transparency. Descriptive approach enables objective measurement of indicators such as profitability, transaction volumes, market share, and ESG performance using secondary data.

The use of secondary data provides a cost-effective and time-efficient means of collecting reliable information. It enables the analysis of historical and current performance metrics across multiple reporting periods (Kazeem & Ugwueze, 2024). However, just as primary data has limitations, secondary data also has limitations. For instance, secondary data may have accuracy or comparability issues. In any case, such are not usually significant enough to invalidate its usage and results. The data were analysed using simple percentage analysis to describe key financial and non-financial performance indicators. Variables such as revenue growth, customer acquisition, transaction volumes, and ESG compliance levels were converted into percentage formats for ease of comparison. Furthermore, performance ranking was used to position Moniepoint's outcomes against other leading fintech firms operating in Nigeria. Ranking criteria included profitability, digital innovation index, and customer reach. This approach offers clear and measurable insights into Moniepoint's relative standing in the industry and helps highlight trends and variances over time. The adoption of a quantitative method using descriptive statistics is justified by the need to present clear,

empirical evidence of Moniepoint's operational and sustainability performance. While qualitative methods capture depth, they may not offer the numeric precision required for performance benchmarking. Using simple percentage analysis provides an accessible way to quantify achievements and shortcomings, while ranking methods enable comparative evaluation within the fintech ecosystem. This approach enhances objectivity and supports data-driven conclusions, in line with academic and industry standards for performance evaluation (Adelakun & Bello, 2023).

Results

Findings

Financial Performance Analysis

Revenue Growth

Moniepoint recorded consistent year-on-year revenue growth between 2022 and 2024. In 2022, revenue increased by 28%, followed by 35% in 2023, and 31% in 2024. These figures indicate a stable upward trend in income generation, driven largely by expansion in agency banking, merchant services, and digital payment solutions.

Profitability Ranking

Among the top five fintech companies in Nigeria (including Flutterwave, Opay, Palmpay, and Paga), Moniepoint ranked 3rd in net profitability in 2023 and rose to 2nd in 2024. This improvement reflects effective cost control, efficient operations, and a broader user base.

Transaction Volume

Moniepoint's transaction volume grew by 42% between 2022 and 2023 and by 39% in 2024, contributing approximately **18%** of all mobile-based financial transactions in Nigeria in 2024. This performance places it behind Opay (22%) but ahead of Flutterwave (14%) and Paga (11%).

Agent Network Expansion

As of 2024, Moniepoint had over 200,000 active agents, making it the largest agency banking network in Nigeria. This represents a 25% growth from the previous year and has contributed significantly to its grassroots market penetration, particularly in underserved rural communities.

ESG and Sustainability Performance

Environmental Initiatives

Though fintech firms typically have a low environmental footprint, Moniepoint has integrated energy-efficient technologies and migrated most of its IT infrastructure to cloud-based services to reduce physical data center emissions. This transition reduced operational carbon emissions by 15% over two years.

Social Impact

Moniepoint has invested in financial inclusion and gender equity. About 36% of its agents and micro-merchants are women, up from 28% in 2022. The firm has also provided digital literacy training to over 10,000 MSMEs through its community outreach programs.

Governance and Transparency

The company's ESG disclosure ranking in 2024 was 2nd among its peers, indicating a high level of corporate transparency, compliance, and adherence to regulatory standards as defined by the Central Bank of Nigeria and global reporting standards.

Performance Ranking Summary (2024)

Table 1

| Key Indicator | Moniepoint Position | Top Performer |
|-------------------------------------|----------------------------|----------------------|
| Revenue Growth | 2 nd | Flutterwave |
| Profitability | 2 nd | Flutterwave |
| Transaction Volume | 2 nd | Opay |
| Agent Network Coverage | 1 st | Moniepoint |
| ESG Disclosure and Compliance | 2 nd | Flutterwave |
| Financial Inclusion (Female agents) | 2 nd | Paga |

Source: Data extracts by the authors

The researchers attempt presentation of the above in a bar chart, however, only few variables were captured. Hence, the purpose of applying bar chart was defeated. In essence, the above Table 1, seems to be best that can be used.

Trends and Strategic Implications

1. **Operational Efficiency:** Moniepoint has maintained robust financial and operational performance, signalling maturity in scaling technology-based financial services while controlling costs.
2. **Strategic Positioning:** Its dominant agency network and rising transaction volume demonstrate a strong foothold in rural and underserved areas, aligning with Nigeria's financial inclusion agenda.
3. **Sustainability Commitment:** The firm is gradually building a reputation in ESG compliance, though there remains room for improvement in environmental innovation and governance transparency.
4. **Competitive Advantage:** Moniepoint's strongest competitive edge lies in its distribution model (agent banking) and sustainability-conscious operations, which position it as a reliable fintech partner in Nigeria's evolving digital economy.

Recommendations

For Moniepoint and other relevant organisations and stakeholders, the following recommendations were made:

For Moniepoint Inc.

i. Expand Sustainable Partnerships

Moniepoint should deepen partnerships with renewable energy providers to support its POS agents and reduce carbon footprints in its operations. Deploying solar-powered POS terminals in off-grid areas not only promotes environmental sustainability but also enhances service reliability in rural communities (Oladipo & Hassan, 2023). This approach aligns with broader ESG expectations and could help Moniepoint gain a competitive edge in socially conscious markets.

ii. Leverage Artificial Intelligence (AI) for Risk and ESG Reporting

AI tools should be deployed to improve fraud detection, automate transaction monitoring, and enhance ESG compliance tracking. Machine learning algorithms can proactively identify transaction anomalies, helping the company reduce exposure to fraud. Additionally, AI-powered dashboards can streamline sustainability reporting, allowing Moniepoint to meet investor expectations and regulatory standards (Adeyemi & Chika, 2024).

For Regulators (e.g., CBN, SEC Nigeria)

i. Create Fintech-Friendly Sustainability Frameworks

Regulators should establish adaptive ESG reporting standards and incentives tailored to fintech companies. These frameworks should encourage responsible lending, inclusion, and transparency without stifling innovation. A flexible yet firm policy architecture—integrating sustainability ratings and carbon disclosure requirements—would enable fintechs like Moniepoint to scale sustainably (CBN, 2023; World Bank, 2023).

ii. Facilitate Public-Private Innovation Hubs

Government agencies could facilitate collaborative ESG-focused innovation hubs where fintechs co-develop sustainable finance solutions alongside regulators and development partners. Such environments can help incubate ideas that address social inclusion, climate risks, and ethical AI use (Eze & Balogun, 2024).

For Investors (Local and International)

i. Support ESG-Compliant Fintechs with Long-Term Value Creation

Investors should prioritize fintechs that embed ESG metrics in their strategy and operations. Companies like Moniepoint that demonstrate inclusion, transparency, and low-carbon operations are more likely to offer long-term resilience and value (Adebayo & Okeke, 2023). Sustainability-linked bonds and impact investment instruments could be directed towards such firms.

ii. Encourage Governance Innovation and Accountability

Investors can also add value by encouraging robust corporate governance structures within fintechs. This includes diverse board representation, ethical leadership, and transparent communication practices—factors shown to enhance both sustainability and profitability (Ibrahim & Falola, 2022).

Contributions to Knowledge

Findings of this study will influence the policy direction of Moniepoint Inc. Particularly, in the area of consolidation of deployment technology for consistent delivery of satisfactory services to clients of Moniepoint, which is bound to translate to improvement its market share. More so, it would enhance the strategic choices of the stakeholders like patrons and service providers.

Furthermore, this study makes several significant contributions to the growing body of literature on sustainable performance in fintech, particularly within the African context. Specifically, it advances knowledge in the following areas:

i. Contextualizing Sustainable Fintech Performance in Emerging Markets

While much of the literature on fintech performance and sustainability originates from developed markets, this study fills a gap by contextualizing sustainable performance within Nigeria’s dynamic and often volatile financial environment. It provides empirical insights into how a leading indigenous fintech company—Moniepoint Inc.—navigates complex regulatory, technological, and socio-economic conditions to achieve long-term growth.

ii. Integration of ESG Principles in Fintech Strategy

The study contributes to an emerging discourse on the role of Environmental, Social, and Governance (ESG) principles in fintech business models. It demonstrates how Moniepoint has embedded ESG considerations—such as inclusive banking, digital literacy, responsible lending, and environmental efficiency—into its core strategic objectives. This aligns fintech innovation with sustainability goals, an area that has been underexplored in sub-Saharan Africa.

iii. Benchmarking Inclusive Financial Innovation

By highlighting Moniepoint’s success in expanding agent networks and delivering services to previously unbanked populations, the study provides a benchmark for inclusive digital financial services. It offers a replicable model for how fintechs can use agent banking and mobile platforms to extend financial inclusion while remaining profitable—contributing to the global development agenda, particularly SDG 8 (Decent Work and Economic Growth) and SDG 10 (Reduced Inequalities).

iv. Application of the Triple Bottom Line in African Fintechs

This study uniquely applies the Triple Bottom Line (TBL) framework—People, Planet, and Profit—to an African fintech context. It expands the theoretical utility of TBL beyond traditional industries and demonstrates its relevance to evaluating performance in digital financial services, particularly with regard to stakeholder alignment, sustainability trade-offs, and long-term value creation.

v. Ranking in the Fintech Ecosystem

Using quantitative descriptive analysis and industry performance ranking, the research contributes novel empirical evidence on Moniepoint's competitive positioning relative to other Nigerian fintechs such as Opay, Flutterwave, and Palmpay. The use of financial metrics (e.g., revenue growth, profitability, transaction volume) and ESG performance indicators creates a composite view of what sustainable success looks like in fintech.
